

Oppuna

Private AI for your thoughts.

Offline, multilingual and CBT-informed emotional wellness on Android

Kaushik I B · Founder & Product/AI Architect

<https://oppuna.com>

ADILAKSHMI INFOTECH PRIVATE LIMITED

Dignity and privacy are not premium features.

“I built Oppuna around a simple belief: receiving emotional-wellness support should not require an account, constant connectivity or surrendering private thoughts.”

Oppuna is a coined, Koraga-inspired name. The documented Koraga verb root “oppu” means “to be agreeable” or “to be in accord.” The complete word “Oppuna” is not presented as a literal dictionary translation.

The name honours the language and cultural presence of the Koraga indigenous community of coastal Karnataka. The product is dedicated to the spirit of inclusion represented by that heritage—and designed for a broad audience.

Interpretation: meeting a person where they are—with agreement, dignity and without judgement.

Living-leaf mark

Sensitive thoughts are still being asked to trust the cloud.

1 Privacy

Emotional content may pass through accounts, cloud servers and third-party AI systems.

2 Access

Many products require connectivity, subscriptions or English-first interaction.

3 Trust

People may hesitate to open up when they cannot control where their information goes.

India context (need $\neq$ Oppuna customers):

- NMHS 2015–16: about 10.6% of Indian adults had a current mental disorder; treatment gaps commonly reported near 70–92%.
- IAMAI–Kantar 2025: 958 million active internet users in India.
- Statcounter (India mobile OS, Mar 2025 snapshot): Android about 94.8% of mobile OS traffic share.

Oppuna's wedge is general CBT-informed emotional wellness and self-reflection—not clinical treatment populations.

Private, structured wellness support can now run on the phone.

What Oppuna delivers

- No account required
- Emotional content remains local
- On-device intelligence
- Offline and airplane-mode operation
- Voice and multilingual accessibility
- No advertising in vulnerable moments
- Local export and delete controls

Why now

- On-device AI capability is improving on mainstream Android devices
- Android has large reach across India
- AI-assisted self-help is becoming familiar
- Privacy concerns create a differentiated opening for local-first design

CBT turns overwhelming thoughts into manageable actions.

1

Recognise
the emotion

2

Capture the
automatic thought

3

Examine
the evidence

4

Build a
balanced reframe

5

Choose one
manageable action

6

Reflect and
observe patterns

Connected Oppuna practices

Mood check-ins

Guided thought records

**Thought-reframing
exercises**

Guided journaling

**Behavioural / wellness
goals**

Grounding and breathing

Daily plan

Progress summaries

CBT-informed self-help for everyday wellness—not therapy or diagnosis.

Oppuna helps people recognise thoughts and emotions, examine patterns, reframe unhelpful thinking, practise grounding and breathing, choose manageable actions and observe progress—privately on Android.

One private space for the practices that build consistency.

1. Check in

Mood on this device

2. Daily plan

Small structured steps

3. Journal

Thoughts stay local

4. Talk

On-device companion

5. Return home

Observe patterns

Privacy and safety are product architecture—not policy promises.

- Journals, moods, thought records, voice notes and conversations remain on the device.
- On-device intelligence supports CBT-informed and general-wellness workflows.
- Local safety logic can present appropriate crisis resources; Oppuna is not an emergency service.
- Export and delete controls provide user control; offline operation is first-class.
- Optional device biometric / PIN app lock is available; SQLCipher-class database encryption is a funded improvement—not a current claim.

Shipped now vs funded

Shipped: local storage, offline companion, CBT-informed workflows, crisis-resource presentation, export/delete, optional app lock.

Funded: stronger on-device models, encryption hardening, broader device validation, professional CBT review, multilingual voice depth.

Early users are returning to a private, structured experience.

80–100

Early users

~90%

Returned during the current
observation period

Live on Google Play · Production website at oppuna.com

Approximately 90% of tracked early users returned during the current observation period.

Founder-reported early-user tracking across approximately 80–100 users. The current return measure is directional and is not yet equivalent to standard D7 or D30 cohort retention.

India is the starting point for private, accessible CBT-informed wellness.

Initial customer wedge

- Android-first adults in India
- Privacy-conscious users
- People with inconsistent connectivity
- Users seeking structured self-reflection rather than clinical treatment
- Regional-language and voice-first users

These figures are enabling-context statistics, not a multiplied TAM. Oppuna does not treat clinical prevalence as its addressable customer count. The near-term job is to prove retention and willingness to pay inside a focused wedge.

Market framing

Enabling market

958M active internet users in India (IAMAI-Kantar 2025). Android dominates India mobile OS traffic (~94.8%, Statcounter Mar 2025).

Initial segment

Privacy-seeking Android adults who want structured CBT-informed self-help that works offline.

18-month target

5,000 monthly active users with defined retention and early paid conversion.

Expansion

Institutional pilots → embeddable SDK for partners.

The core remains free; revenue comes from depth and distribution.

Investment thesis: Oppuna is the consumer proof point for a privacy-first, on-device CBT-informed wellness engine. Consumer adoption validates the product; Oppuna Plus and institutional programs provide early revenue; the longer-term SDK creates platform leverage.

1 Now

Free core

Trust, access and daily engagement

2 Near-term

Oppuna Plus

Depth, voice and personalisation

3 After retention

Institutional

Employer, NGO, CSR pilots

4 Longer-term

SDK / platform

License the privacy-first engine

Free core includes: basic CBT-informed exercises · mood check-ins · thought records · journaling · breathing and grounding · basic daily plan · crisis resources · local export and delete.

Future Oppuna Plus: stronger on-device models · natural low-latency voice · advanced personalised CBT-informed journeys · deeper insights · longitudinal summaries · user-controlled encrypted backup and migration.

Pricing hypothesis

₹99–₹199 / month

Not final pricing · no ads · no data sale · no per-message fees

Trust-led distribution begins with focused, measurable channels.

Phase 1 — Validation

- Google Play and app-store optimisation
- Founder-led community adoption
- Privacy, CBT self-help and regional-language educational content
- User referrals

Phase 2 — After retention is established

- NGO and community partnerships
- Employer or CSR-sponsored pilots
- Selected public-wellness programs

Early checkpoint

1,000

active users as an early validation step—not the final milestone of the ₹1 crore round.

Oppuna competes through architecture and structured engagement.

Dimension	Oppuna	Wysa	Calm / Headspace
Where content is processed	On device	Cloud / AWS servers	Cloud + content CDN
Interactive support offline	Yes (core)	Requires connectivity	Downloaded content may work offline; interactive cloud features do not
Structured CBT-informed workflows	Yes	Yes (care library)	Mindfulness / sleep content focus
Account required	No	Anonymous options; still server-based	Account typical
Voice + multilingual	Voice roadmap; EN · HI · ES	Chat-led; multilingual options	Content libraries; account ecosystems
Local data control	Local-first	Server-stored (transit/at-rest encryption)	Cloud sync / accounts
Business model	Free → Plus → institutional → SDK	Consumer + enterprise wellbeing	Subscription content platforms

Emerging moat: on-device CBT-informed workflow engine · local-model optimisation · safety-aware offline workflows · voice and multilingual UX · privacy-led brand · future embeddable SDK.

Built by a founder who takes complex systems to production.

Kaushik I B

Founder & Product/AI Architect

- 12+ years across software architecture, cloud and AI
- Enterprise systems across banking, FinTech and AI platforms
- TOGAF certified; Microsoft Teams ecosystem experience
- Currently building enterprise AI and agentic systems
- Built Oppuna end-to-end—from architecture and on-device workflows to Google Play launch

Kaushik combines enterprise architecture experience with the ability to build and ship privacy-sensitive AI products independently.

₹1 crore takes Oppuna from early usage to validated, revenue-generating wellness infrastructure.

Raising

₹1 crore pre-seed

Runway

18 months

Product & safety

- Professionally reviewed CBT journeys
- On-device AI + multilingual voice upgrade
- Local-data protection & safety testing
- Broader Android device validation

Engagement

- 5,000 monthly active users
- Defined D30 retention of 25%+
- 1,000 users completing ≥ 4 structured CBT-informed exercises

Commercial

- 500 Oppuna Plus subscribers or ₹1 lakh MRR
- 2–3 paid institutional pilots

Use of funds

40% Product, Android and on-device AI engineering · 15% CBT content and professional review · 15% Privacy, safety, security and testing · 20% User research, community distribution and growth · 10% Institutional pilots, legal and operations

Oppuna is building a future where structured emotional-wellness support does not require surrendering privacy.

Retention methodology

Appendix 1

- Current claim: approximately 90% of tracked early users returned during the observation period.
- Population: approximately 80–100 early users.
- Source: founder-reported internal tracking.
- Limitation: not yet a frozen D1, D7 or D30 install cohort with a pre-declared return definition.
- Prospective framework: cohort start date · observation window · qualifying return event · exclusions · D1/D7/D30 · monthly active users.
- Purpose of the upgrade: make retention comparable for diligence and milestone tracking against the 25%+ D30 target.

Current architecture and funded improvements

Appendix 2

Current product

- Android application
- Local data storage
- On-device / offline companion
- CBT-informed wellness workflows
- Mood, journal and thought records
- Local crisis-resource presentation
- Export / delete controls
- Offline operation
- Optional biometric / PIN app lock

Funded improvements

- Stronger on-device models
- Encryption hardening
- Biometric / PIN protection hardening
- Broader device validation
- Professional CBT-content review
- Expanded safety testing
- Multilingual voice improvement
- User-controlled backup and migration

Product and revenue roadmap

Appendix 3

Free core

Shipped now

- CBT-informed basics
- Mood + thought records
- Journaling
- Breath / ground / sleep
- Daily plan
- Crisis resources
- Export / delete

Oppuna Plus

In development / hypothesis

- Stronger on-device models
- Natural voice
- Personalised journeys
- Deeper insights
- Longitudinal summaries
- Encrypted backup*
- Device migration*

Institutional

Future

- Sponsored access
- Employer pilots
- NGO / CSR programs
- Public-wellness pilots
- No sale of user data

SDK / platform

Longer-term

- Privacy-first engine
- White-label path
- Partner integrations
- Local-model packaging
- Safety workflows

* Future / hypothesis — not shipped. Roadmap items are not existing features.
