Daily care
Mindfulness
Simplicity

Dignity and privacy are not premium features.

Oppuna is a coined, Koraga-inspired name. The Koraga verb root “oppu” means “to be agreeable” or “to be in accord.”

“Oppuna represents meeting a person where they are—with agreement, dignity and without judgement.”

- The name honours the Koraga indigenous community of coastal Karnataka.
- The product is dedicated to inclusion—and designed for a broad audience.
- Technology should respect users before asking for trust.

Living-leaf mark
Dignity, not spectacle

The most sensitive thoughts are still being asked to trust the cloud.

Privacy

Vulnerable thoughts still pass through accounts, servers and third-party AI pipelines.

Access

Many products depend on continuous connectivity and subscriptions for basic support.

Trust

People hesitate to open up when they do not control where their information goes.

India context: ~10.6% of adults live with a current mental disorder (NMHS), with treatment gaps of ~70–92%. 958M active internet users (IAMAI–Kantar 2025), on a ~95% Android mobile OS base (Statcounter). Oppuna targets everyday self-reflection—not clinical diagnosis.

Oppuna keeps everyday wellness support on the phone.

No account

Open and begin—no signup wall.

No cloud processing

Journals, moods and chats stay local.

No advertisements

No ads inside vulnerable moments.

No invasive analytics

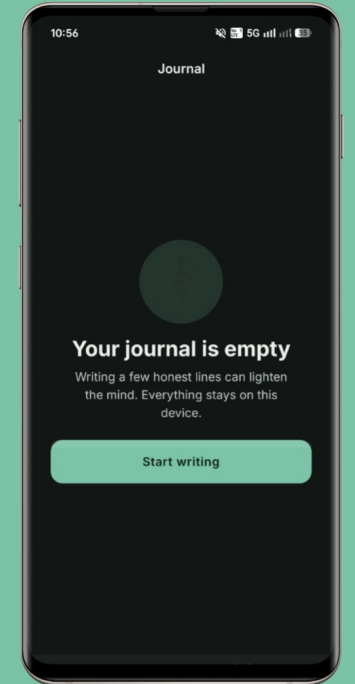

Support without selling attention.

Works offline

Useful in airplane mode and low connectivity.

User control

Local export and delete-all controls.

Your thoughts.
Your space.

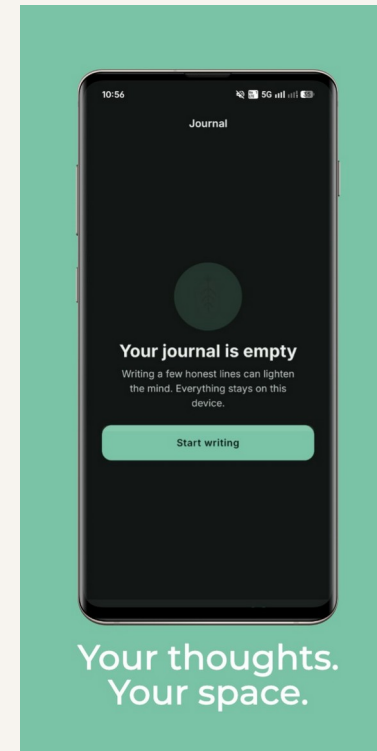

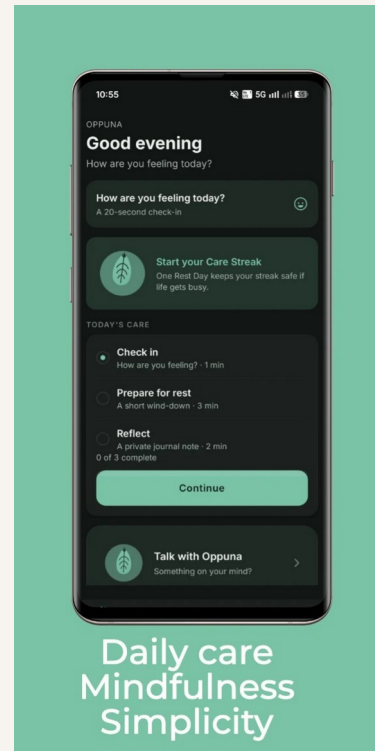

One private space for the small practices that build consistency.

1. Check in with a mood

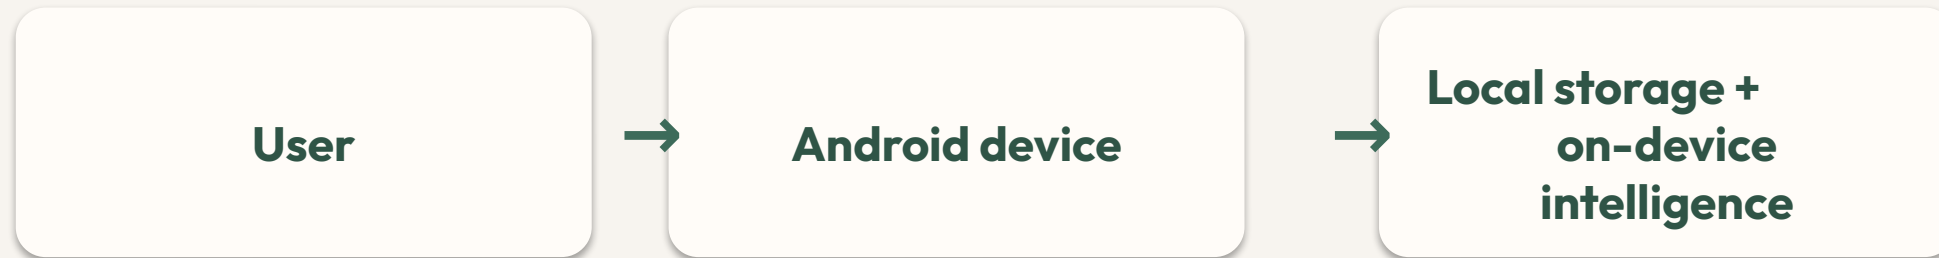

2. Receive a gentle daily plan

3. Journal, breathe, ground or talk

4. Return and observe patterns

Privacy is built into the architecture.

- Journals, moods, voice notes and conversations remain on the device.
- Deterministic safety logic and local crisis guidance complement the on-device companion.
- Offline and airplane-mode operation are first-class product behaviours.
- No claim of perfect safety, clinical validation, or certifications beyond what is verified.

Early users are coming back.

80–100

Early users

~90%

Returning during observation period

Even at an early stage, repeat usage indicates that privacy and offline access are resonating.

Live on Google Play · Production website at oppuna.com

* Based on founder-reported internal early-user tracking across approximately 80–100 users. Replace with a defined D7/D30 cohort before final investor distribution.

India is the starting point for private, accessible digital wellness.

Initial wedge

- Android-first adults in India
- Privacy-conscious users and inconsistent-connectivity contexts
- Everyday self-reflection—not clinical treatment
- Regional-language and underserved communities

Separate clearly: clinical mental-health prevalence (NMHS) shows need and stigma; Oppuna's commercial wedge is general wellness users who want private, offline support. SAM/SOM are planning ranges, not purchased market reports.

Bottom-up sizing

TAM ~900M+

Android-leaning internet users in India (958M AIU × ~95% Android)

SAM ~45–90M

Adults open to digital self-reflection / wellness tools (assumptive 5–10% of AIU)

SOM 1K → 50K

Near-term validation beachhead of active users before scale

Keep the core free; monetise expanded capability and distribution.

1

Free consumer core

Builds trust and daily usage

2

Optional Oppuna Plus

Advanced AI, voice, insights

3

Institutional programs

Employer, CSR, NGO,
public wellness

4

SDK / platform

License the privacy-first
engine

Pricing hypothesis (not final): Oppuna Plus ₹99–₹199 / month.

Principles: no ads in vulnerable moments · no selling personal/emotional information · no per-message charging · core support stays free.

Premium adds depth without taking support away.

Free core (always)

- Basic on-device supportive companion
- Mood check-ins, journaling, thought records
- Breathing, grounding, sleep wind-down
- Basic daily wellness plan
- Crisis resources + local export/delete

Future Oppuna Plus

- More capable on-device AI models
- Low-latency natural voice conversations
- Deeper personalisation & guided journeys
- Advanced mood trends / progress summaries
- User-controlled encrypted backup & migration

Trust-led distribution can reach users conventional wellness apps miss.

1. Google Play + ASO
2. Founder-led communities
3. Regional-language & privacy content
4. NGO / community partners
5. CSR-sponsored access
6. Employer & institutional pilots
7. Public-wellness / innovation programs

Next milestone

1,000

active users
for validation

Oppuna competes on architecture, not another content library.

Dimension	Oppuna	Wysa	Calm / Headspace	Cloud AI chatbots
Fully offline core	Yes	Limited	No	No
On-device intelligence	Yes	Cloud AI	Content / cloud	Cloud
No account required	Yes	Anonymous options	Account typical	Account typical
No advertisements	Yes	Consumer freemium	Subscription	Varies
Local user control	Yes	Policy + servers	Cloud sync	Cloud
India / multilingual	EN-HI-ES	Strong India focus	Global content	Varies
SDK / platform path	Planned	Enterprise focus	B2B wellness	Platform APIs

Emerging moat: on-device architecture · local-model optimisation · safety-aware offline workflows · trust-led brand · multilingual UX · future SDK.

The team combines enterprise experience with product execution.

Appendix • Retention methodology

- Current claim: approximately 90% of early users returned during the current observation period.
- Population: founder-reported internal tracking across approximately 80–100 early users.
- Not yet defined as D7, D30, monthly retention, DAU/MAU, or paid retention.
- Before final investor distribution: publish cohort start date, observation window, return definition, and exclusion rules.
- Recommended upgrade: report D1/D7/D30 for a frozen install cohort with Play Console as source of truth.

Appendix • Architecture and privacy controls

- Client: Android application with local storage for journals, moods, voice notes and conversations.
- Intelligence: on-device supportive companion with offline fallback guidance.
- Safety: deterministic crisis logic + local crisis-resource presentation (not an emergency service).
- Controls: local export and delete-all; optional biometric/device app lock where available.
- Non-claims: no asserted clinical validation, no claimed certifications, no selling of emotional data.

Appendix • Free, Plus, enterprise and SDK roadmap

Free

- Companion basics
- Mood + journal
- Breath / ground / sleep
- Daily plan
- Crisis resources
- Export / delete

Oppuna Plus

- Stronger on-device models
- Natural voice
- Deeper personalisation
- Longitudinal insights
- Guided journeys
- Encrypted backup*

Enterprise / CSR

- Sponsored access
- Employer programs
- NGO / community rollout
- Public-wellness pilots
- No sale of user data
- Optional verified referrals**

SDK / platform

- Privacy-first engine
- White-label path
- Partner integrations
- Local-model packaging
- Safety workflows
- Distribution leverage

* User-controlled ** Future, consent-based — not currently claimed as shipped
